<th>Brentuximab vedotin (Adcetris®) with chemotherapy for CD30-positive peripheral T-cell lymphoma (PTCL)</th>
</tr>
</thead>
<tbody>
<tr>
<td>General information [1]</td>
</tr>
<tr>
<td><strong>Drug description</strong></td>
</tr>
<tr>
<td>Brentuximab vedotin is an antibody–drug conjugate composed of an anti-CD30 monoclonal antibody conjugated by a protease-cleavable linker to the microtubule-disrupting drug monomethyl auristatin E.</td>
</tr>
</tbody>
</table>

**Current treatment [2]**

- NICE recommends cyclophosphamide, doxorubicin, vincristine and prednisolone (CHOP) chemotherapy as first-line treatment for people with peripheral T-cell lymphoma.

**Regulatory status**

<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Approval status for this indication:</strong> positive CHMP-opinion on 2020-03-26:</td>
<td><strong>Approval status for this indication:</strong> approved:</td>
</tr>
<tr>
<td>- Brentuximab vedotin in combination with cyclophosphamide, doxorubicin and prednisone (CHP) is indicated for adult patients with previously untreated sALCL</td>
<td>- Brentuximab vedotin is indicated for previously untreated sALCL or other CD30-expressing PTCL, including angioimmunoblastic T-cell lymphoma and PTCL not otherwise specified, in combination with CHP.</td>
</tr>
</tbody>
</table>

**Other indications:**

- **Hodgkin lymphoma (HL)**
  - indicated for adult patients with previously untreated CD30+ Stage IV HL in combination with doxorubicin, vinblastine and dacarbazine (AVD)
  - indicated for the treatment of adult patients with CD30+ HL at increased risk of relapse or progression following ASCT
  - indicated for the treatment of adult patients with relapsed or refractory CD30+ HL:
    - following ASCT, or
    - following at least two prior therapies when ASCT or multi-agent chemotherapy is not a treatment option.
- **sALCL**
  - indicated for the treatment of adult patients with relapsed or refractory sALCL
- **Cutaneous T-cell lymphoma (CTCL)**
  - indicated for the treatment of adult patients with CD30+ CTCL after at least 1 prior systemic therapy.

- **Orphan status**
- **Medicine under additional monitoring**
- **Medicine received a conditional marketing authorisation**

**Costs**

<table>
<thead>
<tr>
<th>€ 3,330.00 (ex-factory price) [5]</th>
</tr>
</thead>
</table>

1 vial of Adcetris® 50 mg powder for concentrate for solution for infusion = € 3,330.00 (ex-factory price) [5]

Patients of the ECHELON-2 trial (A+CHP group) received brentuximab vedotin 1.8 mg/kg intravenously on day 1 of each cycle for a median number of 6.0 treatment cycles. Assuming an average body weight of 70 kg, costs for 1 cycle → € 9,990.00 → 6 cycles = € 59,940.00.

**Posology [6]**

- Primary prophylaxis with growth factor support, beginning with the first dose, is recommended for all patients with previously untreated sALCL receiving combination therapy.

**Study characteristics [1, 7]**

---

1 The approval of a medicine that address unmet medical needs of patients on the basis of less comprehensive data than normally required. The available data must indicate that the medicine’s benefits outweigh its risks and the applicant should be in a position to provide the comprehensive clinical data in the future.

### Efficacy (I vs. C)³

**Median PFS (per IRF for the ITT population):** 48.2 months (95% CI 35.2–not evaluable) vs. 20.8 months (95% CI 12.7–47.6); HR 0.71 (95% CI 0.54–0.93), p=0.0210

Median PFS (per IRF) for patients with centrally-confirmed sALCL: 55.7 months vs. 54.2 months; HR 0.59 (95% CI 0.42–0.84, p=0.003)

**3-year PFS:** 57.1% (49.9–63.7) vs. 44.4% (37.6–50.9)

**OS:**
- HR 0.66 (95% CI 0.46–0.95), p=0.0244
- as of the data cut-off date, 124 deaths occurred: 51 (23%) deaths vs. 73 (32%) deaths
- after a median follow-up of 42.1 months (95% CI 40.4–43.8), the median OS was not reached for either group.

**CR rate and proportion of patients who achieved an objective response:** statistically significantly higher in the A+CHP group than in the CHOP group (CR rate, p=0.0066; objective response, p=0.0032).

**Subgroup analysis for patients with locally-diagnosed sALCL:**
- OS: HR 0.54 (95%CI 0.34–0.87), p=0.0096
- CR rate (by IRF) at the end of treatment: 71.0% vs. 53.2%, p=0.0004
- ORR rate (by IRF) at the end of treatment: 87.7% vs. 70.8%, p<0.0001

### Safety (I vs. C)⁴

- **Any AEs:** n=221/223 (99%) vs. n=221/226 (98%)
- **Grade ≥3 AEs:** n=147/223 (66%) vs. n=146/226 (65%)
- **SAEs:** n=87/223 (39%) vs. n=87/226 (38%)
- **Discontinuation:** n=14/223 (6%) vs. n=15/226 (7%)
- **Death:** n=7/223 (3%) vs. n=9/226 (4%)
